RiyalPay Tracking Plan

v3 — current spec, maintained by Analytics Engineering

This is the intended event schema going forward (post-migration, Segment-style pipeline). Use it as the source of truth when validating what actually landed in the raw exports.

Standard Fields (Every Event)

Field	Type	Notes
`event_name`	string	snake_case, from the taxonomy below
`user_id`	string, nullable	null only for pre-signup/anonymous events
`event_timestamp`	ISO-8601 UTC	e.g. 2026-03-04T13:22:01Z
`platform`	string	iOS or Android
`app_version`	string	semver, e.g. 3.5.0
`event_properties`	JSON object	event-specific fields, see taxonomy below
`ingested_at`	ISO-8601 UTC	pipeline arrival time; should closely track event_timestamp

Event Taxonomy

Onboarding

- `app_open`
- `signup_start` — `{channel}`
- `signup_otp_verify`
- `signup_complete`

KYC

- `kyc_start` — `{experiment_variant}` (present only if user is in an active KYC experiment)
- `kyc_document_upload` — `{document_type: national_id | iqama | passport}`
- `kyc_approved`
- `kyc_rejected`

Core Usage

- `home_view`
- `notification_received` — `{campaign_id}`
- `notification_opened` — `{campaign_id}`

Money Movement

- `add_money_start / add_money_success / add_money_failed` — `{amount, currency, method?, reason?}`
- `send_money_start / send_money_success / send_money_failed` — `{amount, currency, recipient_type?, reason?}`
- `bill_pay_view` — `{biller_category}`
- `bill_pay_success` — `{amount, currency, biller_category}`

- `cashback_claim` — `{amount, currency}`

Known Migration Note

Analytics Engineering migrated the event pipeline from a legacy in-house SDK to Segment on **2026-01-05**. Events emitted before that date came from the old SDK and were exported separately by the legacy system — that export was not necessarily re-mapped to this spec before being handed off. Validate accordingly.

Experiment Reference

`exp_kyc_streamline_2026` — eligible population: users reaching the KYC step between 2026-02-02 and 2026-03-16. Intended split: 50/50 control/treatment, randomized independently per platform. Assignment log: `experiment_assignments_raw.csv`.
